Enjoy your mobile aboard as ashore

Monaco Telecom Maritime Services (MTMS) is a mobile solution provided by Monaco Telecom, headquartered in the Principality of Monaco.

MTMS is an off-the-shelf product enabling passengers to enjoy all 3G+ & 4G services of their personal mobile device and stay connected while on-board from Voice Call to internet and multimedia.

The flexibility and high scalability of this solution allow MTMS to suit vessels of any type and size. This solution can also accommodate all of most deployed satellite installation.

In addition, a MTMS monthly postpaid mobile plan is available for crew.

1. The SmallCell is an UMTS/LTE transceiver. It supplies 3G+ & 4G communications to mobile phones on board.

2. The GPS receiver measures the position of the ship and transmits the information to the location application.

3. The satellite communication system ensures the transmission between the ship and the ground infrastructures.

4. The ground infrastructures manage the connection with the ship, the management of the service and the establishment of communications with global networks.
